Education

Lambda School

April 2019 - October 2020

- Hands-on curriculum focused on computer science and software engineering.
- Developed Single Page Applications using React JS
- Built and deployed REST APIs PostgreSQL, MongoDB, Node.js, Express.js, and Knex.js.
- E2E application testing

Projects

Planet Data | React / Redux / Python / Victory / Material UI

- A interactive react web application that shows how global data driven research affects our day-to-day lives.
- Created user dashboard and quizzes for each visualization.
- Built multiple visualizations using react and victory
- Designed application using Figma.

Grail House | React / Redux / MongoDB / Styled Components

- A react web application where users can create their own digital shoe closet and trade shoes.
- Users can create a profile, add and remove shoes from their closet and see how much each shoe is reselling for on other popular sneaker apps.
- Implemented react-redux and redux-persist for state management.
- Built a RESTful api MonogDB with NodeJS.
